Decomposed Granite As Paving Material Decomposed granite is a paving material you might consider for certain areas, such as paths, walkways and driveways. In contrast to other materials, such as concrete, it provides a more natural appearance.

Here are some decomposed granite Q&A for walkways and patios. How and when should DG be used and where to find it.

Kafka Granite's naturally occurring decomposed granite and crushed stone are screened to a 1/4" minus size, allowing for a firm surface that compacts well, while retaining permeability. Our 60+ colors of pathway materials make for beautiful and organic walkways, nature paths, bike trails, courtyards, patios, and more.
