The more kids move while they are learning, the easier it is for them to understand difficult concepts, to pay attention and to be successful in school.

For instance, gym, art, music and drama are all subject areas where most teaching strategies are activities that require students to focus on physical movement. Students who are kinesthetic learners often perform better in these subjects. They are able to recall more key concepts and subject-based vocabulary, and they make meaningful connections with the subject material. They understand these subjects because they learn while they are in motion.

Useful learning activities are ones where the student is able to take what they have learnt from engaging with the activity and use it in another context, or for another purpose. For example, students are able to directly apply the skills or knowledge they acquired to an assessment task, or to the next activity in your unit.
